

See now we have a conversation with the complete bid team and all and what I got to know basically is the flow we made here is not fully familiar to use base with them basically we gonna change some kind of flow here ok lets findout one by one ok:

1. Auth stuff

Here mainly we have going to only thee roles:

- >Super Admin
- >Admin
- >Manager
- >Bid Executive
- >pre-sales
- >Finance

And let me explain all the roles authorization ok Super admin and Admin basically gonna same thing can be able to get the main analytics dashboard and then can be able user management like add delete user modify user and all and also force password reset can be able to done . and can also add delete see tender details modify state and full control of the system and all ok super admin is going to be only one user and also make sure in our auth no email thing is we are handelling

ok here we now hadell email ok and here the super admin having the mail is for now by default biswabhusans@globx.co.in

And username is Sadmin and password is Admin@123 and here any one can login email or username with password ok. And super admin can be able to change the password of himself as well and also every user can be able to edit tehre profile and all. Ok and admin have the same thing can like see the complete dashboard analytics dashboard and can see all tenders and stages can able to modify and can also change the stages and also edit user add user change password and all super admin only one and admin can be so many and super admin ca able to dedcide also add admins and all admin can not add new admins and all ok.

Manager:

Manager can see the dashboard of all the tender data and all can able to edit modify and all tender thing also can be able to addd tender as well and also can change stages of the tender ok. and manager dashboard can see all the bid-exucatives all the report like which bid exucative added which tenders and all hown many tenders which bid exucative added and what are the all tenders report like which is in which stage and all this thing can be seen from the manager dashboard.

Bid-exucative:

Bid executive have no dashboard like only can see all the tenders and its like how many active and all and how many in particular stages and all. Mainly executive can be like discover bids and add in the sheet and all and then manage the lifecycle according step by step and all . ok bid executive can manage the lifecycle of the tender ok . and each bid executive can able to manage the lifecycle of the tender which only he/she added like owner of that tender. Or else who is explicitly added to that tender can able to also manage and all.

Pre-sales/Sales:

also here these person can check the like if any tender is discovered all the presales and sales persons are like alerted like with the gem id they are alerted to have a look for the Eligibility and all ok . presales and sales only can like do the 2nd stage thing like can be mark as eligible of the tender ok it only can be done by the presales. And presale can see all the tender like details and all and same dashboard like the total tenders and all.

Finance:

Finance role is basically just get the alert from the bid executive or admin manager or superadmin if they alert to the finance from the stage of EMD processing ok . and finance guy can also see like can able to see the tender details and all same like

exucative and presales and all and finance guy can like only if he get any request from them alerted to EMD processing then the finance buy can accept and send back aler as readya and all ok and that stage is only mark as complete by exucative and manger and all ok .

See here is a Tender Stages:

Stage	Activity
1	Tender Search & Identification
2	Eligibility Assessment
3	OEM Authorization Request
4	Pricing Request
5	Document Checklist Preparation
6	EMD Processing (If Required)
7	Bid Documentation
8	Internal Approval
9	GeM Submission
10	Technical Evaluation
11	Financial Evaluation
12	Award & Handover

Now see I explain you how this thing is happens :

Tender Search & Identification:

First bid executive see the tenders in the various tender portals and check if the tender is basically good for our company or our company can go with it or not then according to tender document they add the thing in the sheets which is basically in the application we have now in a form but we gonna change some of its things as well ok .

Then after adding there is the term came Eligibility Assessment here this basically the second stage here the presales are alerted after tender discovered by executive or anyone else they are alerted via mail as well in the site that tender with this id is discovered check about this and give our remarks and all and then presales can see check details and if eligible he mark as Eligible and all ok .{ This thing can also be done by the executive or manager or admin or superadmin like can mark the stage of Eligible and all}.

[In each stage there is a mark as complete button is there when click first some validation will go on if all are ok a dialog appears are you sure to mark it as complete and all ok. Can also disable mark if some issue happens and all it only can be done by same executive manager admin and superadmin].

Then comes OEM authorization Request this can be alerted by the admin super admin manager and executive to the presales persona and all same alert style and can be also alert if automatically is the

tender eligibility stage has done and all then here comes the part here in this stage this type of thing come in page:

PROCESS INITIATED	MAF CERTIFICATE	MII CERTIFICATE	NO MALICIOUS CERTIFICATE	ADDITIONAL DOCUMENTS FROM OEM	FOLLOW UP	Remark	Clarification Required	Clarification Provided
YES ▾								
YES ▾	NOT RECEIVED ▾						Tata Tele and Crayon do not provide pricing for Microsoft Visual licenses.	
YES ▾	NOT RECEIVED ▾	NOT RECEIVED ▾			29-07-2026		On-site installation support must be included at no extra cost	Software Assurance (3 Years) required
YES ▾	NOT RECEIVED ▾	NOT RECEIVED ▾			28-07-2026			
YES ▾	NOT RECEIVED ▾	NOT RECEIVED ▾			28-07-2026			
NO ▾	NOT RECEIVED ▾			OEM Turnover			clarification email has been submitted for product specification & SCOPE OF WORK, process will be initiated after the representation published	

like in each tender's OEM stage page should have this table structure to maintain and have to maintain by corresponding presales or manager or exucative and all and also admin and superr admin can be do ok. See according this image the columns all should going to same and the dropdowns as well of the colomns ok here are so many dats so it looking like many but here only two row there of each like one row from column identification and anuthor for filling like initiated :Yes then maf recive or not and so on each tender having this thing in the Oem stage and all. And below this add the document todo of the OEM side which is ceated at creation time which I gonna explain you further that also tick amrk thing can be done and all like it may be dynamic if in sheet maf is yes then it auto yes in the todos of te oem doc task and all.

Then comes **Pricing request** In this stage there is a center box is tehre asking pricing request sent or not if yes then sented to whom there is todo to add Distributor names whom send and here bid

executive manger and admin super admin can add and all like todo a dn added distributor show like tabular format and all. Then after adding below a button appear called Got response from distributor if click on that then there ask to add prcing amount and quantity of the corresponding distributor ok after adding it may add one or more the there is a calculation table will appear below like this:

S.No.	Description	Qty	Purchase Price Basic	GST	Purchase Price with GST	Total Purchase Price with GST	Margin	GLOBX Unit Price	GLOBX Total Price	Price Check
1	Microsoft 365 A3	280	4,608.00	829.44	5,437.44	15,22,483.20	2.45%	5,570.66	15,59,784.04	0.00

and this is dynamic nothing will be auto add here and the data here come basically the distributor who gave the lowest price and all . basically the price thing are synamically calculated and all it can also editable ok it auto caluculate if add price of distributor then the thing can be editable as well the calculation of colomn thing do formula wise according this calculation this thing basiclally all same the margin is going to be modifyble depend on margin select basically the price all stuff deside from the purchase price basic then quantity then according that deside all gst is 18% and then after al thing calculate acccoridng quantity ok.

Author stage is **Document Check list** basically here on creation time the list of doc created for the bidder DOC and OEM doc this thing basilcaly show here and each doc side a check mark to mark as complete is all doc are maekd then auto matically this stage flagged as compete if like any one later unmark one then it automatically then unflag as complete and all ok. This can done by bid exucative manager and admin and superadmin and all.

Then comes the **EMD Processing** here what happenen in this page show a button like alert finace team regarding this on click ogf that mail will be triggered to the finace persons and all site alert as well mail alert with proper details and all then comes a button EMD/BG ready this can be click by finace person or bidexucative manager and admin and super admin and if cclick that a dialog came like conform all the EMD/BG ready then get a remarks to add and all ok. Then after conform mark this stage as complete and all.

Then comes **Document checklist** here what happen there is new todo box like doccueknt check list here in sudgession show those docs like the bidder doc and the oem doc which are marked checked here show as sugession and is click add that todo with checked marked and also can bel to add custom diccument and all and that add is not by default checked it can be manually click checked then if all checklist are marked then make this stage as complete but ask first in a dialog automatically like all the checklist have done should we go further to Internal approval if yes yes if no then not send mail wait . then if user manually click mark as complete the stage then ask again in dialog conform as every dialog have this feature to mark and all ok so so like that set as complete and then auto mail trigger and all.

Then comes **internal approval** Here when the Bid documentation

part is completed the manger and admin and the presales team are going to be automatically alerted via mail and site as this bid is with all the bid data show like this this and all product ad price all thing is on internal approval please do have look and all ok. And this thing can be mark complete button done by manager presales admin and bidexucative and all.

Then comes the part **Gem Submission** here what basically happen is when the internal approval basically completed here in the stage there is a button shows gem Submission done ask here basically The Final Price and all then ok then this stage also completed and show as a confetti successfully submitted and Good luck and all.

then after this It automatically go under **technical evaluation** this stage also unlocked after that and here shows add evaluation result on click of that there ois a dialog came ask for here like qualified or disqualified if qualified then confetti and go for financial evaluation stage .and if not and marked as disqualified then show dialog reason of disqualified and all and after that the bid is basically closed and all ok like mark as technical disqualified.

Then come here as the **financial evaluation** here show a buttona s add result on click of that show like win or lost if lost then show dialog ask like the data of who is L1 basiclaly ask for L1 company name price then automatically calculate the difference an

dpercentage from our price in a table and our price is basically going to be editable also if change calculate according it then there is a mark as complete then the thing is gonna save like this difference and difference in perdentage and all and mark the tender as lost ok. but if won then mail to all the thing like manager exucative admin superadmin and all and then there is a Delivery Stage is gonna created basically here what done is if EMD is here given then here ask EMD Returned or not likie thing maintain here and also if bg is required in the corresponding tender bg has been proceeded or not and all ok this two thing going to be check un check and should be maintained after ween because this re quired for Bi prospective and all ok because the nalsystics dashbord is going to be shown in the admin and the superadmin should be like fully enterprise grade all filter anl systics dashboard and all ok . mainly can able to see proper financial report and all from date to date like custom dates and all according tender added and all and also can be able to see like which are discovered and how amny in technical eval stage how many financial eval stage how amny own how many lost all thing I want and then also can see if iwned like how manya re like not refunded the emd values and how many value of tender we won and how much is basically the emd total amount we have given till and how much recived all stuff is gonan be proper like analysyics manageable filtrationa ll thing going to be should be tetre proper tool tip imnfo as well every where and all and proper follow of sadcn component and responsive and all like for big screen to small screen

all maintained and all and here the form part here need some changes of the form of the ui :

and the form where tender added basically make it in 2 section form now basically is 3 sectioned I need it two sectioned and all need make bid type which is regular and ra bid make that ra bid to BID to RA and all and add a high level scope and also remove the compliance toggle of technical eval require and all no need of that and make opening and closing date to starting and ending date and all and then month is basically dynamically select according the end date and all ok it can not be editable automatically choose according end date and the the BG rate is basically not every where require so as a toggle of BG required or not if toggle yes then enable the BG rate input and all. And the status ownership thing like authority and dept stuff should be comes under the specification thing not in ownership and all and there is no bid owner basically the bid owner is by default whom is basically adding the data ok and technical manager is basically choosable whose role is manager here show in dropdown all. These are all in one section then there is another section after completing all add the necessary fields as mandatory and all and in next section check list stuff all their Bidder Docs and OEM docs instead bidder task or oem task and all and the docs is of suggestion of oem is MAF certificate and MII certificate No malicious certificate and then custom addable and on bidder docs :
Experience certificate ,Company information docs, Non black listed

forms ,bidder turnover technical compliance sheet and custom adds and all.

In dashboard the admin manger and superadmin this thing in a row can see the count of from all tenders :

Total ,Submitted,Not Submitted,Technical Eval, Financial Eval , Won, Loss .

and also one most important thing there is like currently process like one stage ccan not be moved if anathor is not doen but here now this thing is not a important all process are viwable and moddifyble and all but see some conditions are here like gem submission can not be happen if all the stages before are not marked as completed each stage mark complete time there is a remark should be asked and should be maintained and all and a stage observation should be there for each tender to see what happening and whi is doing at what time and all ok. This thing should show in a stage block of the perticullar tendedr in agraph like format like git brach like stuff and all ok.

and like create STGA EBLOCK LIKE THIS IN A ROW:

 Overview  Checklist  Stage History  Members

FOR like see each and all and also can the functionality of each insie that as I told and all. And also as the perticullar bid is gonna

manged by the bid executive basically who added then the member tab is basically for to add additional anyone who can basically like to access authority to edit the tender and all like as admin super admin and manager have authority but we can basically here add like extra executive or extra manager and all ok so for that that member tab is there and in that member tab the members are also show in a particular order and all. As in the overview also show a proper detailed overview of the tender to know all the details some one who see and all ok and fix the sheet columns as well if needed like I want a high level scope thing as in input when tender is going to added so that also I need there in the sheet and all and sheet also maintained according edits and all ok.
